ArcGIS® Enterprise on APAN

The complete GIS system that powers your location intelligence

What Is ArcGIS Enterprise?

ArcGIS® Enterprise is the complete software system for all your geospatial needs—make maps, analyze geospatial data, and share results to solve problems. Collaborate around the ArcGIS Sites application. Build your foundational maps and data layers and extend with ArcGIS apps, like ArcGIS Solutions, Experience Builder, ArcGIS Field Maps, ArcGIS Workforce, and ArcGIS Dashboards, to meet your organization's needs.

What can users do?

- *Leverage your existing database infrastructure, and configure ArcGIS Enterprise to meet your organization's needs with web apps and extensions*

- *Map and visualize your data and control who you share it with via Groups*

- *Analyze your data using focused applications from real-time data analysis to deep image analysis*

How It Works

1. Control, store, and access data

2. Map and analyze data

3. Extend with additional ArcGIS apps

4. Make decisions informed by location

# Benefits of ArcGIS Enterprise

- **Data management**

  Connect to your existing data stores and ready-to-use storage. Take advantage of Esri's extensive collection of curated geospatial data for enhanced perspective.

- **Mapping and visualization**

  Visualize your data spatially to improve your business decisions. From a simple web map to a fully customized application, you choose the way you want your data displayed for maximum impact.

- **Analysis and discovery**

  Perform analysis in your web browser with ArcGIS Enterprise tools that help you see patterns, trends, and anomalies in your data. Uncover the power of your data— whether it's vector, raster, real-time, or big data—with ArcGIS Enterprise.
