## HOW DOES IT WORK?

The awards are typically for a period of three years with two additional years as an option. New awards can be funded up to \$1.5M per year, with the actual amount contingent upon the availability of funds, the specific topic and the scope of the proposed work. All award selections result from a merit-based competition of the proposals. Proposal submission is a two-stage process including white papers and full proposals.

This program is administered through the Air Force Office of Scientific Research, the Army Research Office, and the Office of Naval Research. The MURI Funding Opportunity Announcement (FOA) will be available on [Grants.gov](https://www.grants.gov). Search AFOSR MURI.

## WHAT IS IT?

MURI supports basic research in the science and engineering areas intersecting more than one traditional discipline. The program is focused on multidisciplinary team efforts to address issues of critical concern to the DoD, Air Force, and Space Force. The goal of this program is to advance defense research, accelerate technology transition, and educate scientists and engineers in the interdisciplinary areas important to national defense.

MURI is a DoD-wide program which strives to answer basic research questions that cannot be addressed via single-investigator awards.

Congratulations to Professor Michael Shulman at the University of San Diego on receiving a \$4.5M Multidisciplinary University Research Initiative (MURI) program award from AFOSR! The research funding will benefit the USD Department of Mathematics within the College of Arts and Sciences.
